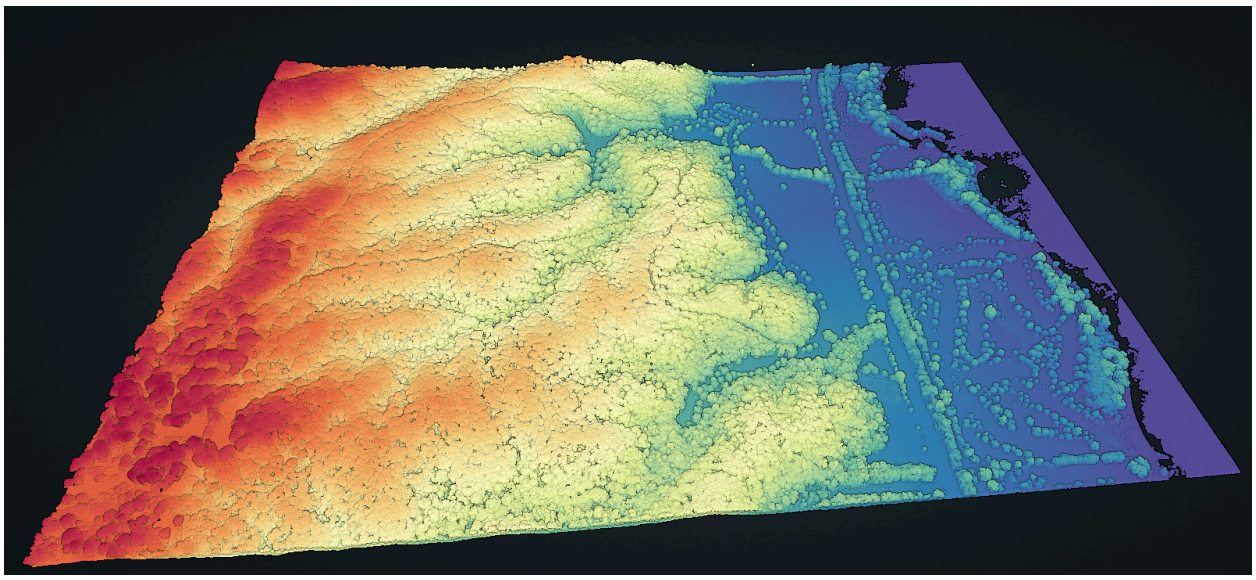
V0.01- 3/5/21
Beginning LiDar data transformation

- Grabbing LiDar data from Illinois Height Modernization Map
- Opening in CloudCompare
  - Importing 9 tiles
  - Merging meshes
  - Applying rotation, scale
  - Segmenting
  - Exporting.ply file
  - Exporting .fbx file
- Too many trees, road is almost completely covered, undriveable

V0.02- 3/17/21
Starting from scratch

- Getting Google Maps data and stitching in Photoshop
- Successful, not highest quality

- Scaled reference image
- Beginning path for road
    - Remember to use 3D cursor!
    - Make sure curve origin and mesh origin are at the same location
    - Object → Set Origin → Origin to 3D Cursor
    - Object → Set Origin → Geometry to Origin
    - May have to use curve modifier in -Y direction
- Completed loop (3 separate meshes)
- Created mesh for highway loop
- Hunting for height maps
- Signed up for account on OpenTopography
    - Activating account allowed for requested region of data
    - Only took a few minutes



- Working in CloudCompare, creating mesh
